

	MONDAY	TUESDAY	WEDNESDAY	THURSDAY	FRIDAY
MRS. MALE'S ACADEMIC STRATEGIES & HOMEROOM	Last Friday, a personalized 'Behavior & Work Habits' Rubric, as well as a conference announcement, was handed to each student to take home. Please let your homeroom teacher know if your copy did not make it home. We have copies. dbm	2:25-3:00 CHESS with Dr. Larkin	Double Sessions schedule: 2nd & 5th hour 5th grade academics today! Early release @ 2:10p		www.ixl.com is available to help you be successful in ALL subjects. This week, sign into the 'Diagnostic Arena' and earn your personal math achievement score!

This week, as we wrap up Q3, we officially begin a new phase of the 21st century learning platform: 'IXL.com', with a feature called 'Real-Time Diagnostic Arena'. Where the 30 IXL skills that have been assigned over the last 7 weeks REINFORCED the 7 AZ State Standard concepts learned in the classroom, 'IXL Real-Time Diagnostic Arena' is a measure of what you know in a wide variety of skills. Yes, it is a type of placement test.

What is the IXL Real-Time Diagnostic?

IXL's Real-Time Diagnostic is an adaptive assessment tool that provides an accurate, up-to-the-minute portrait of each and every student. By answering questions in the Real-Time Diagnostic, students can pinpoint their current levels of knowledge in math (overall and in specific strands).

As the Real-Time Diagnostic gathers insights, students receive personalized recommendations that help them figure out what actions to take for growth. This engaging Diagnostic **empowers students to have a more active role in their ongoing learning journey**, and teachers can also use this truly up-to-date snapshot of their students' understanding to challenge them at just the right level.

How often should a student use the IXL Real-Time Diagnostic?

The Real-Time Diagnostic is always available; students can enter the Diagnostic at any time and answer as many questions as they like. When students first use the Diagnostic, we recommend they aim to diagnose until their complete diagnostic data is revealed—for most students, this will be around 110–125 questions (hint: answer carefully! 'Random button-pushing' will stretch your testing out over many more questions). After that, we suggest answering 10–15 diagnostic questions each week to help keep their levels and recommendations up to date. When students' levels have been pinpointed, each level will be represented as a circle with a single number next to it.
